

Mohammed Alsheikh

Software Engineering Student

Riverside, CA | (951) 855-6539 | moalsheikh2004@gmail.com

Portfolio: moalsheikh.com | LinkedIn: linkedin.com/in/moalsheikh

OBJECTIVE

Aspiring software engineer with hands-on experience in machine learning, mobile development, and cloud-based systems. Passionate about using AI to build engaging, safe, and impactful digital experiences. Seeking to contribute in ML models and scalable backend technologies to improve user engagement and platform intelligence.

EDUCATION

California Baptist University, Riverside, CA

Bachelor of Science in Software Engineering | Provost's List (Spring 2024)

Expected Graduation: April 2026

SKILLS

Languages: Python, Java, C++, Swift, JavaScript, SQL, HTML/CSS

Frameworks/Tools: PyTorch, Scikit-learn, TensorFlow, React, Node.js, Firebase, GitHub, Docker, FastAPI

Technologies: Machine Learning, NLP, Computer Vision, Recommender Systems, REST APIs, Cloud Services (AWS, Firebase), Model Deployment, CI/CD, Microservices Architecture

Other: Agile Development, Git, UI/UX Design, Technical Writing, Data Preprocessing, DevOps Practices, Graph Neural Networks, Problem Solving, Collaboration

PROJECTS

AI Study Buddy Chatbot | Python, NLTK, Scikit-learn

- Built a conversational NLP chatbot using classical ML to help students study for exams.
- Implemented keyword extraction, topic modeling, and sentiment analysis from educational input.

Lancer Arms App | Swift, Firebase

- Designed and developed a mobile app for student housing with real-time chat, geolocation, and emergency features.
- Integrated Firebase Authentication, Firestore, and cloud messaging for user data and notifications.

Smart Media Cloud Pipeline (Personal Project) | Python, Firebase, AWS

- Created a cloud-based pipeline for uploading, tagging, and storing media using AWS S3 and Vision AI.
- Automated metadata generation and built a basic UI for image filtering and retrieval.

NETNEST - AI Restaurant Management System | Java

- Developed AI-driven features for customer behavior tracking and smart menu recommendations.
- Improved order efficiency by 30% and collaborated cross-functionally to refine UI/UX.

SocialGraph - ML-based Social Recommendations | Python, NetworkX, Scikit-learn

- Built a graph-based friend suggestion system using GNN principles and user interaction data.
- Achieved 85% accuracy in predicting meaningful connections using behavioral embeddings.

Anomalyzer - User Anomaly Detection Tool | Python, PyTorch, FastAPI

- Developed an AI tool that detects unusual user activity using autoencoders and behavior modeling.
- Integrated with RESTful APIs to allow real-time detection and flagging for moderation.

WORK EXPERIENCE

Resident Advisor | California Baptist University

Aug 2024 - Present

- Built and maintained a student-focused app with real-time communication and safety alerts.
- Managed resident relations and resolved conflicts with empathy and clear communication.
- Organized and analyzed resident feedback to improve digital and physical engagement strategies.

International Student Ambassador | Oct 2023 - Present

- Mentored global students, providing technical support and cultural onboarding.
- Communicated across departments and managed inquiries through CRM-style workflows.

VOLUNTEERING

Fellowship Baptist Church | Web & Tech Support Volunteer

Oct 2023 - Present

- Maintained and updated the website, implemented performance improvements, and trained staff on backend tools.
- Integrated APIs and improved system reliability for better user engagement.

INVOLVEMENT & CERTIFICATIONS

Formula SAE EV Team | Software & Data Subsystems Jan 2023 - Present

- Developed embedded software tools for monitoring electric vehicle performance.

Apple Privacy & Security Workshop | July 2023

IBM Data Science Specialization

Completed Feb 2024
